Objective

Software Engineering student with strong problem-solving skills and hands-on experience building full-stack web applications and REST APIs using modern technologies. Familiar with backend development concepts, authentication systems, role-based access control, and scalable application architecture while actively practicing Data Structures and Algorithms.

Education

Dy Patil College of Engineering (SPPU), Pune
Bachelor of Engineering in Information Technology

Aug 2023 – July 2027

- CGPA: 9.52 / 10

Data Structures & Algorithms

- **Knight** on Leetcode(2092 rated) [LeetCode](#) 🔗
- **Pupil** on codeforces(1275 rated) [Codeforces](#) 🔗
- Solved **800+** Data Structures and Algorithms problems across LeetCode and Codeforces

Projects

yourVoice — Anonymous Feedback and Communication Platform

[GitHub](#) 🔗 — [Live](#) 🔗

- Developed a full-stack anonymous communication platform enabling secure interaction between students, staff, and administrators.
- Designed and implemented RESTful APIs for authentication, query handling, and role-specific operations.
- Implemented authentication and role-based access control (RBAC) to ensure secure and restricted access across different user roles.
- Built backend authorization workflows and protected frontend routes for secure application access.
- Added admin moderation and audit logging features to improve accountability and system management.
- Deployed the application using Vercel (frontend) and Render (backend).
- **Tech:** React, TypeScript, Node.js, Express.js, MongoDB

DevMate — SaaS-Style Project Management System

[GitHub](#) 🔗

- Developed a scalable full-stack project management platform to manage Clients, Projects, Tasks, and Invoices.
- Designed and implemented RESTful APIs for project workflows, task management, and secure authentication using JWT
- Followed a TypeScript-first architecture to improve maintainability, reliability, and long-term scalability.
- Structured the application using modular backend architecture and reusable frontend components.
- Used Git-based development workflows and implemented consistent API error handling and loading states.
- **Tech:** React, TypeScript, Node.js, Express.js, MongoDB

Technologies

Programming Languages: C++, Java, JavaScript, TypeScript

Frontend Technologies: React.js, Tailwind CSS, JavaScript (ES6+)

Backend Technologies: Node.js, Express.js, RESTful APIs, Basic Spring Boot

Databases: MongoDB, Mongoose, MySQL (basic)

Tools & Development Practices: Git, GitHub, Postman, API Debugging, TypeScript-first development

Core Computer Science: Data Structures & Algorithms, OOP, DBMS, OS
